View a summary of app and compute health

Click the **Dashboard** to see a high-level view of your apps, compute, and their health.

The screenshot shows the LongBoat IE dashboard. At the top, it says 'Welcome to LongBoat IE'. Below that is a notification bar stating: 'You are currently on the Free Plan and your limit is set to 10 applications. If you want to upgrade to the Premium Plan, please click the button below.' with a 'Manage Plans' button. The main section is titled 'Resources summary' and contains two tiles. The 'Apps' tile shows '4/10 Managed' and a status summary: 'All Healthy' (green checkmark), 'Not Fully Protected' (4 orange circles), and 'Discovered' (0 blue circles). The 'Compute' tile shows '1 Managed' and a status summary: 'All Healthy' (green checkmark). Below the summary is a 'Getting started' section with four steps: 1. 'Manage Kubernetes compute' (Add compute to install the Astra storage operator), 2. 'Add your applications' (Install your stateful applications onto Managed Compute and Astra storage classes), 3. 'Manage applications' (Enable your applications to be protected and cloned), and 4. 'Invite users' (Share access to your account with colleagues).

The Apps tile helps you identify the following:

- How many apps you're currently managing.
- Whether those managed apps are healthy.
- Whether the apps are fully protected (they're protected if recent backups are available).
- The number of apps that were discovered, but are not yet managed.

Ideally, this number would be zero because you would either manage or ignore apps after they're discovered. And then you would monitor the number of discovered apps on the Dashboard to identify when developers add new apps to a cluster.

Note that these aren't just numbers or statuses—you can drill down from each of these. For example, if apps aren't fully protected, you can hover over the icon to identify which apps aren't fully protected, which includes a reason why.

Apps

4/10
Managed

All Healthy

Not Fully Protected 4

Discover

Getting started

Manage Kubernetes compute
Add compute to install the Astra storage operator

Add your applications
Install your stateful applications onto Managed Compute

App "test-postgres-app" is only partially protected:
Missing an active backup schedule
Missing a recent backup

App "postgres1-postgresql" is unprotected:
No backups or scheduled policy

App "maria" is only partially protected:
Missing an active backup schedule
Missing a recent backup

App "mariadb-mariadb" is only partially protected:
Missing a recent backup

The Compute tile provides similar details about the health of the compute and you can drill down to get more details just like you can with an app.
